1. Introduction

Why was the study undertaken? What was the research question, the tested hypothesis or the purpose of the research?

Hello, here is some text without a meaning. This text should show what a printed text will look like at this place. If you read this text, you will get no information. Really? Is there no information? Is there a difference between this text and some nonsense like “Huardest gefburn”? Kjift – not at all! A blind text like this gives you information about the selected font, how the letters are written and an impression of the look. This text should contain all letters of the alphabet and it should be written in of the original language. There is no need for special content, but the length of words should match the language. 1.1 Problem Situation

Hello, here is some text without a meaning. This text should show what a printed text will look like at this place. If you read this text, you will get no information. Really? Is there no information? Is there a difference between this text and some nonsense like “Huardest gefburn”? Kjift – not at all! A blind text like this gives you information about the selected font, how the letters are written and an impression of the look. This text should contain all letters of the alphabet and it should be written in of the original language. There is no need for special content, but the length of words should match the language.

Figure 1: Sax approximation of a time series

As can be seen in Figure 1 . . .

1.2 Objectives

Hello, here is some text without a meaning. This text should show what a printed text will look like at this place. If you read this text, you will get no information. Really? Is there no information? Is there a difference between this text and some nonsense like “Huardest gefburn”? Kjift – not at all! A blind text like this gives you information about the selected font, how the letters are written and an impression of the look. This text should contain all letters of the alphabet and it should be written in of the original language. There is no need for special content, but the length of words should match the language.

1.3 Methods

Hello, here is some text without a meaning. This text should show what a printed text will look like at this place. If you read this text, you will get no information. Really? Is there no information? Is there a difference between this text and some nonsense like “Huardest gefburn”? Kjift – not at all! A blind text like this gives you information about the selected font, how the letters are written and an impression of the look. This text should contain all letters of the alphabet and it should be written in of the original language. There is no need for special content, but the length of words should match the language.

1.4 Structure

Hello, here is some text without a meaning. This text should show what a printed text will look like at this place. If you read this text, you will get no information. Really? Is there no information? Is there a difference between this text and some nonsense like “Huardest gefburn”? Kjift – not at all! A blind text like this gives you information about the selected font, how the letters are written and an impression of the look. This text should contain all letters of the alphabet and it should be written in of the original language. There is no need for special content, but the length of words should match the language.

1.5 Tables

Table 1 shows an example table.

Table 1: This is a table		
Column 1	Column 2	Column 3
A	B	C
D	E	F
G	H	I

1.6 Source Code

Listing 1: Hello World in Java

```
1 public class Hello {  
2     public static void main(String[] args) {  
3         System.out.println("Hello World");  
4     }  
5 }
```

Listing 1 shows the classic Hello World in Java.

Listing 2: Hello World in JavaScript

```
1 # This is a comment
```

```
2 print('Hello World')
```

Listing 2 shows the classic Hello World in Python.

2. Background

What backgrounds?

3. Related Work

Related work?

4. Methods

When, where, and how was the study done? What materials were used or who was included in the study groups (patients, etc.)?

5. Results

What answer was found to the research question; what did the study find?
Was the tested hypothesis true?

6. Discussion

Limitations, next steps , ...

What might the answer imply and why does it matter? How does it fit in with what other researchers have found? What are the perspectives for future research?
